**Program Overview**

The Horticultural Technology program is uniquely situated in a 2-year school located on a 4-year land-grant University campus. As a Horticultural Technology student, you will have the opportunity to enjoy a small size classroom atmosphere, develop hands-on skills in courses that consist of a lecture with a corresponding interactive and experiential lab, and take coursework that is both academically and physically challenging. You will study over 200 species of plant life on the University campus and much more. Students who prefer to be generalists in Horticultural Technology may opt for the Plant Production concentration, while students who are interested in some aspect of landscaping will want to choose the Landscape Construction Management concentration.

**Student Involvement**

- UNH Organic Gardening Club
- Thompson School Horticulture Club
- On-Campus Landscape Construction Projects
- Growing plants for campus planters and Celia Thaxter’s Garden
