Program Overview
The Integrated Agriculture Management (IAG) program is truly inter-programmatic, drawing upon diverse course offerings by all of the academic programs at the Thompson School of Applied Science. The goal is to address the rapidly growing national awareness of the relationships between agriculture, forestry, business management and marketing, nutrition, food systems, the environment and community. IAG combines sustainable agriculture, organic production, local foods, farmers’ markets, slow food, community supported agriculture, business, nutrition as well as soil, water and forest conservation in a myriad of ways that are driven completely by the student. Our students are often interested in working directly in diverse agriculture, but their skills allow them to work in many areas.

Student Involvement
- UNH Organic Gardening Club
- UNH Dairy Club
- UNH Horsemen’s Club

Employment Areas
- Sustainable Agriculture
- Sustainable Forest Management
